

RUNOFF COLLECTION POTENTIAL IN ABHA, SAUDI ARABIA: AN ANALYSIS WITH WATERSHED MODELING SYSTEM SOFTWARE

S. Chowdhury; M.I. Fahmi

Department of Civil and Environmental Engineering

King Fahd University of Petroleum & Minerals

Overview

- **Introduction**
- **Study Area**
- **Methodology**
- **Analysis and Results**
- **Conclusions**

Introduction

- **Water scarcity is an issue in Saudi Arabia**
- **Domestic water demand 2.6 BCM/year**
- **Consumption of freshwater was 16.3 BCM in 2014**
- **DW: > 60% of DWD; New investment;**
- **About 3.4-25 kg CO₂ for 1 m³ of DW**
- **Runoff use has co-benefit: less costly; reduce CO₂**

Introduction

- **Countrywide average rainfall: < 100 mm/year**
- **Total 449 dams with 2.1 BCM capacity**
- **SW region has 126 dams with 760 MCM capacity**
- **SW region has average rainfall: 200-250 mm/year**
- **Seasonal flood events with thunderstorms and intense rainfall**
- **Scope of new dams in the SW region**

Study Area

- Annual average rainfall: 215.3 mm
- Existing dam (213 MCM capacity) in SW corner
- In the NE corner, a new dam can be constructed
- Capital of Asir Province

Methodology: New Dam

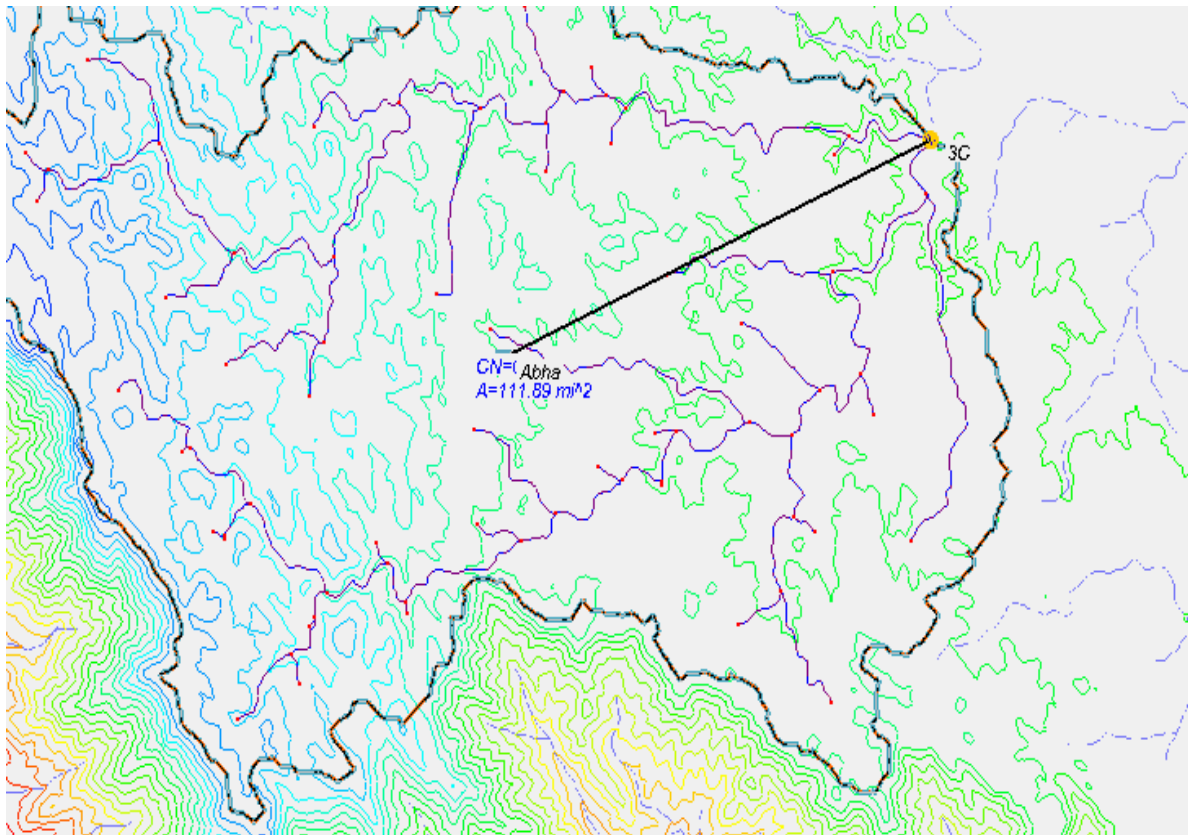

**Sharp Section
over Wadi**

- The location was chosen by Google-Earth software
- Mild slope of wadi; Sharp section over the channel
- Distance from village and road: < 15 km

Methodology: Basin Delineation

- WMS software was used for delineating basin
- The SCS method was used

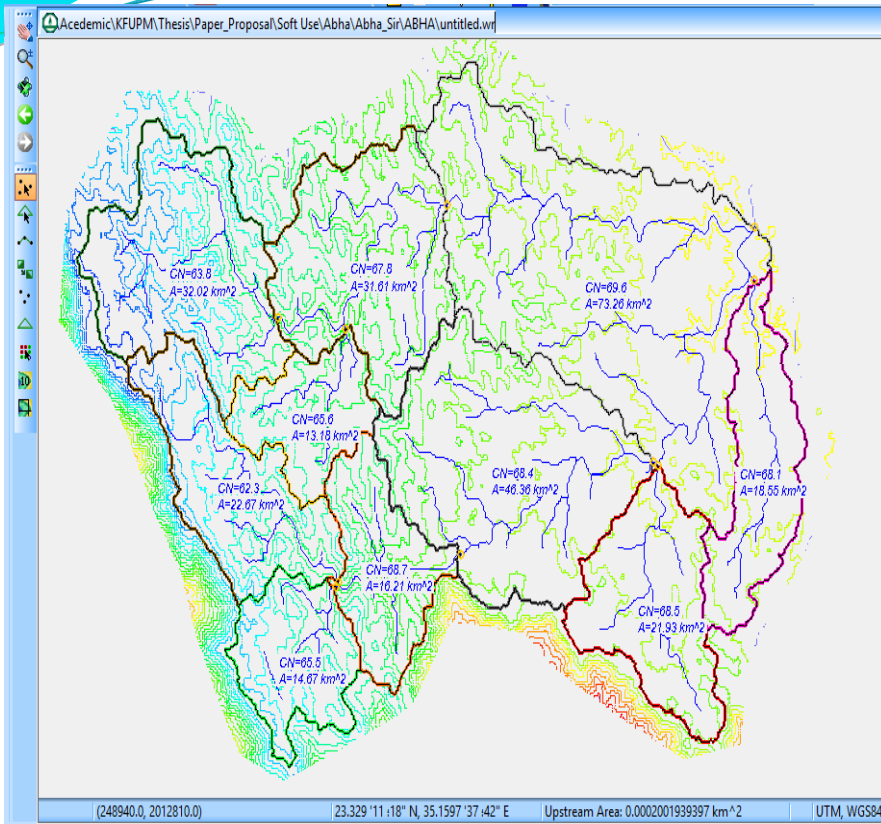

Abha Basin (Area: 112 mi² = 290 Km²)

Methodology: Runoff Generation

- HEC-HMS software was used
- Input parameters:
 - Rainfall duration: 24, 36 and 48 hours
 - Rainfall depth: For T of 25, 50 and 100 years with SD = 20%
 - Curve number: Calculated and applied with SD = 15

| Area Name | Return Periods (year) | Runoff depth (mm) from IDF | Runoff depth (mm) with 20% SD | | |
|-----------|-----------------------|----------------------------|-------------------------------|-----|-----|
| | | | ML | MIN | MAX |
| Abha | 100 | 114 | 115 | 90 | 140 |
| | 50 | 100.2 | 100 | 80 | 120 |
| | 25 | 86.2 | 86 | 69 | 103 |

Methodology: CN

| Basin no. | Area, A_i (km ²) | CN _i value | $A_i * CN_i$ |
|-----------|--------------------------------|-----------------------|--------------|
| 12B | 31.61 | 67.79 | 2142.59 |
| 13B | 13.18 | 65.59 | 864.65 |
| 14B | 32.02 | 63.77 | 2042.20 |
| 15B | 73.26 | 69.61 | 5099.80 |
| 16B | 18.55 | 68.13 | 1263.51 |
| 17B | 46.36 | 68.39 | 3170.73 |
| 18B | 21.93 | 68.53 | 1502.62 |
| 19B | 16.21 | 68.70 | 1113.64 |
| 20B | 14.67 | 65.52 | 960.92 |
| 21B | 22.67 | 62.28 | 1412.21 |
| Σ | 290 | | 19572 |

| Area Name | Area (km ²) | CN from WMS | Curve Number with '15' as SD | | |
|-----------|-------------------------|-------------|------------------------------|-----|-----|
| | | | ML | MIN | MAX |
| Abha | 290 | 67 | 65 | 50 | 80 |

Result: Runoff generation from 27 Fuzzy Rules

25 year return period

| Rule (R _i) | If | Depth (mm) | and | Duration (hour) | and | CN | then | Runoff (MCM) |
|------------------------|----|------------|-----|-----------------|-----|----|------|--------------|
| R1 | If | 69 | and | 24 | and | 50 | then | 0.124 |
| R2 | If | 69 | and | 24 | and | 65 | then | 1.69 |
| | | | | | | | | |
| R26 | If | 103 | and | 48 | and | 65 | then | 7.8 |
| R27 | If | 103 | and | 48 | and | 80 | then | 15.36 |

100 year return period

| Rule (R _i) | If | Depth (mm) | and | Duration (hour) | and | CN | then | Runoff (MCM) |
|------------------------|----|------------|-----|-----------------|-----|----|------|--------------|
| R ₁ | If | 90 | and | 24 | and | 50 | then | 0.772 |
| R ₂ | If | 90 | and | 24 | and | 65 | then | 3.625 |
| | | | | | | | | |
| R ₂₆ | If | 140 | and | 48 | and | 65 | then | 14.74 |
| R ₂₇ | If | 140 | and | 48 | and | 80 | then | 24.6 |

Result: Runoff Generation

25 year return period: Variable CN and rainfall

| Curve number | Runoff volume (MCM) | | |
|--------------|---------------------|-----------|--------------------|
| | Low | Geo. mean | High |
| 50 | 0.124 (R_1) | 0.79 | 2.58 (R_{25}) |
| 65 | 1.69 (R_2) | 4.09 | 7.8 (R_{26}) |
| 80 | 5.2 (R_3) | 9.68 | 15.36 (R_{27}) |

| Rainfall (mm) | Runoff volume (MCM) | | |
|---------------|---------------------|-----------|--------------------|
| | Low | Geo. mean | High |
| 69 | 0.124 (R_1) | 1.57 | 7.66 (R_9) |
| 86 | 0.61 (R_{10}) | 3.47 | 11.38 (R_{18}) |
| 103 | 1.42 (R_{19}) | 5.75 | 15.36 (R_{27}) |

Result: Runoff Generation

50 year return period: Variable CN and rainfall

| Curve number | Runoff volume (mcm) | | |
|--------------|------------------------|-----------|--------------------------|
| | Low | Geo. mean | High |
| 50 | 0.4 (R ₁) | 1.64 | 4.29 (R ₂₅) |
| 65 | 2.63 (R ₂) | 5.95 | 10.84 (R ₂₆) |
| 80 | 6.9 (R ₃) | 12.53 | 19.53 (R ₂₇) |

| Rainfall (mm) | Runoff volume (mcm) | | |
|---------------|-------------------------|-----------|--------------------------|
| | Low | Geo. mean | High |
| 80 | 0.4 (R ₁) | 2.76 | 10.03 (R ₉) |
| 100 | 1.26 (R ₁₀) | 5.32 | 14.64 (R ₁₈) |
| 120 | 2.52 (R ₁₉) | 8.33 | 19.53 (R ₂₇) |

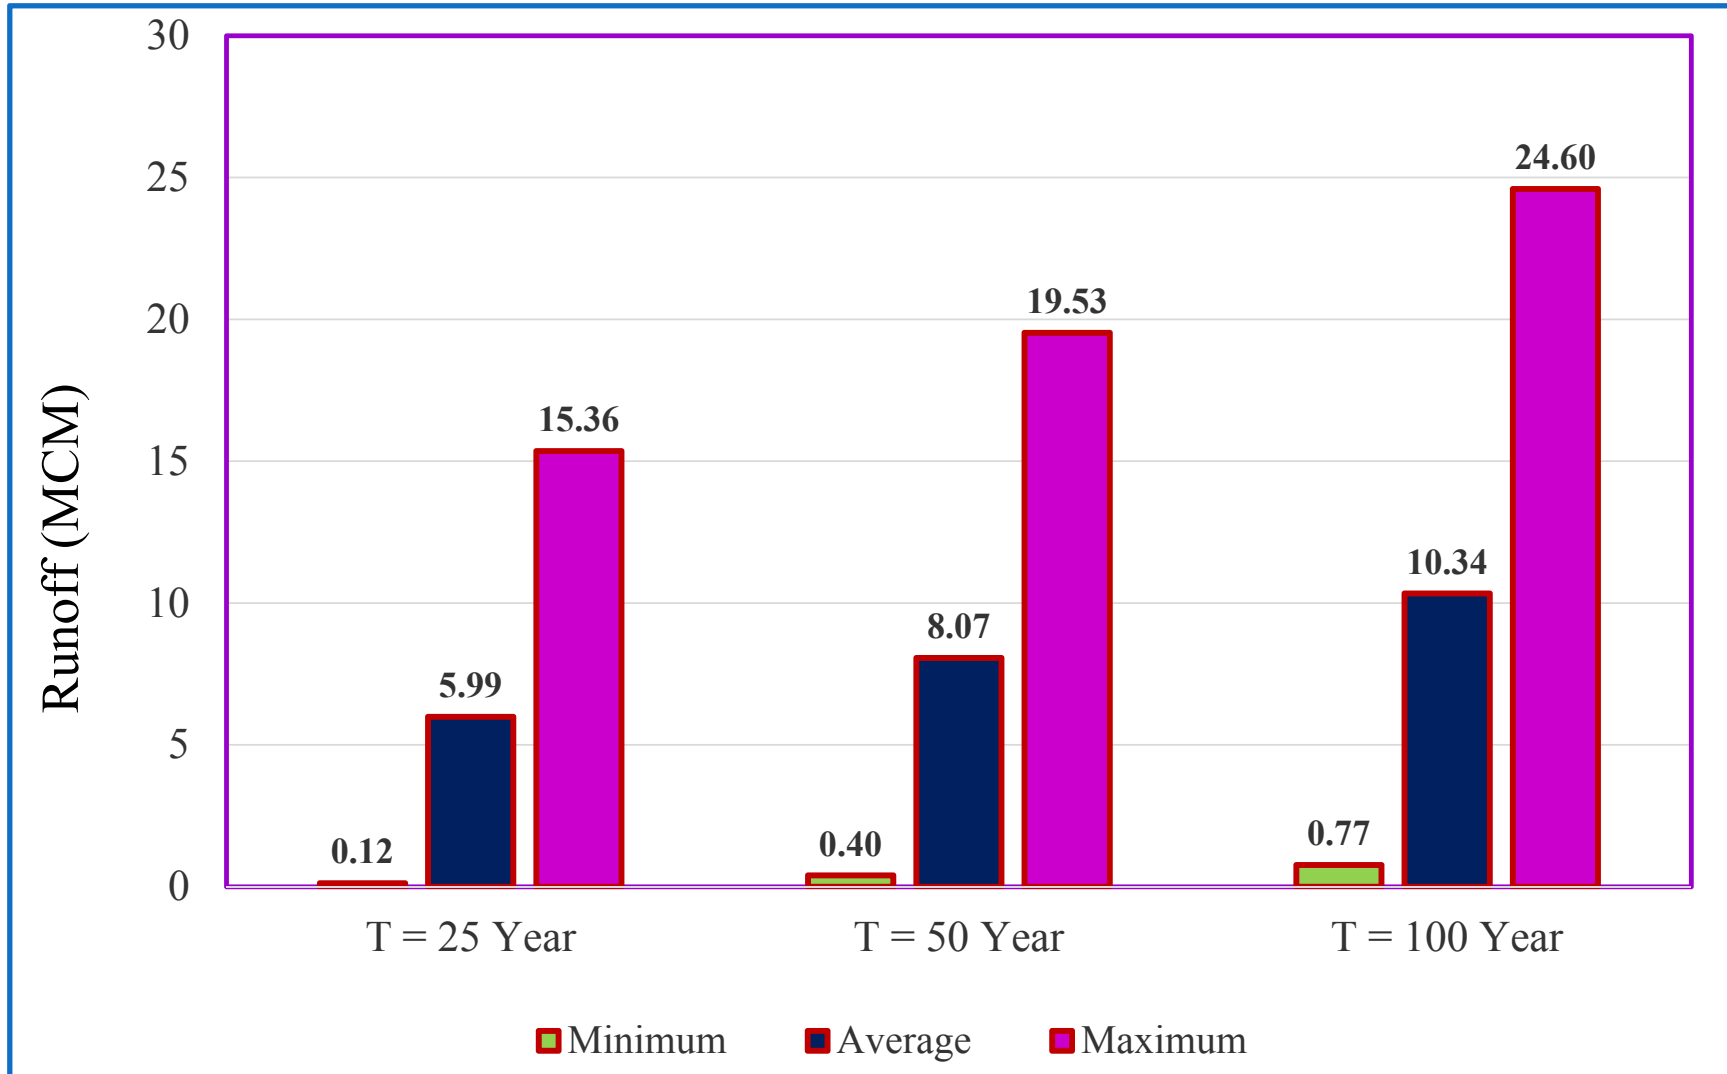

Result: Runoff Generation

100 year return period: Variable CN and rainfall

| Curve number | Runoff volume (MCM) | | |
|--------------|------------------------|-----------|--------------------------|
| | Low | Geo. mean | High |
| 50 | 0.77 (R ₁) | 2.76 | 6.71 (R ₂₅) |
| 65 | 3.63 (R ₂) | 8.11 | 14.74 (R ₂₆) |
| 80 | 8.54 (R ₃) | 15.66 | 24.6 (R ₂₇) |

| Rainfall (mm) | Runoff volume (MCM) | | |
|---------------|-------------------------|-----------|--------------------------|
| | Low | Geo. mean | High |
| 90 | 0.77 (R ₁) | 3.98 | 12.29 (R ₉) |
| 115 | 2.17 (R ₁₀) | 7.54 | 18.29 (R ₁₈) |
| 140 | 4.12 (R ₁₉) | 11.67 | 24.6 (R ₂₇) |

Result: Runoff Generation

Result: Runoff Use and Cost Saving

- Return Period: T = 25, 50 and 100-years:
- Runoff = 0.124 – 15.36 MCM, 0.4 – 19.53 MCM and 0.77 – 24.6 MCM
- Cost for using surface runoff = US\$ 0.756/m³
- Cost savings by using runoff = US\$ 1.084/m³
- Use of 1 m³ DW: Cost US\$ 1.84 (1.31 - 2.37)

Result: Runoff Use and Cost Saving

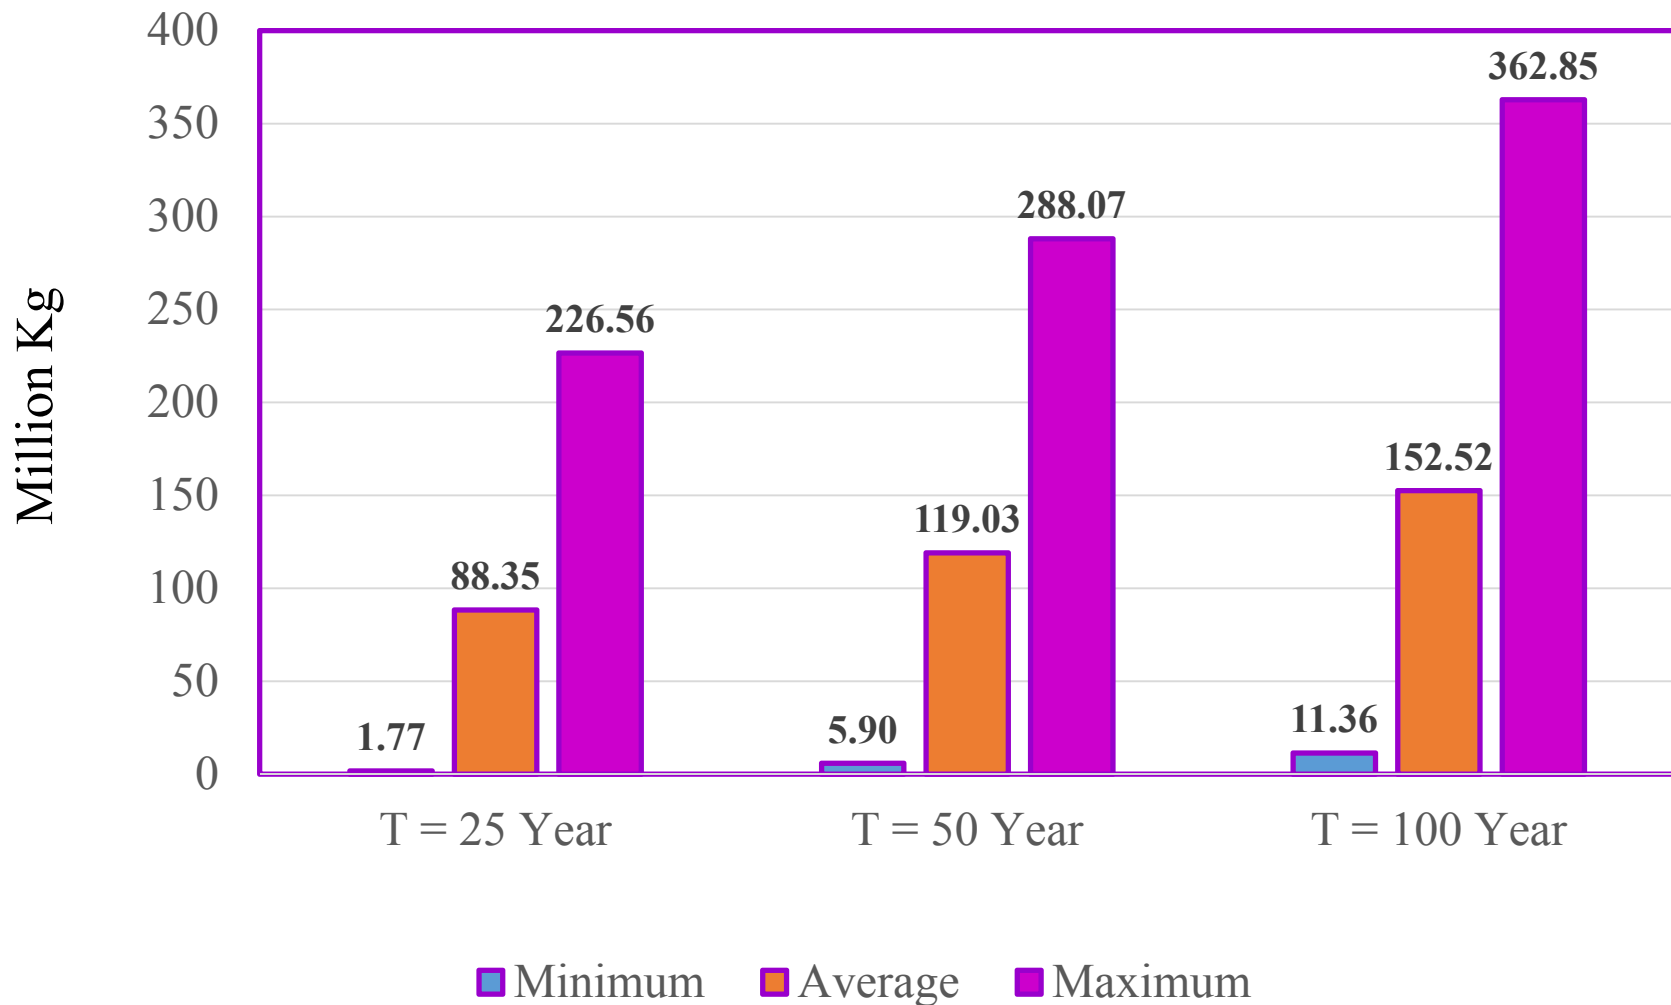

Result: Runoff Use and CO₂ Reduction

| Desalination methods | CO ₂ (Kg) emission for producing 1 m ³ of DW |
|----------------------|--|
| MSF | 20.4-25.0 |
| MSF _{cogen} | 13.9-15.6 |
| MED | 11.8-17.6 |
| MED _{cogen} | 8.2-8.9 |
| RO | 3.4-6.0 |

- Al-Shuqaiq desalination plant delivers DW to Abha
- CO₂ emission for MSF_{Cogen} = 14.75 kg CO₂/m³ DW

Result: Runoff Use and CO₂ Reduction

Conclusions/Recommendations:

- **Up to 24.6 MCM runoff can be collected by a new dam**
- **Use of runoff can save up to US\$ 26.67 million**
- **CO₂ reduction can be up to 362.85 million kg**
- **Needs feasibility study for the location and cost of dam construction**
